

# BLE Locking's Euro cylinder provides a convenient key-sharing platform for rental apartments.

Nowadays, a lot of people use the option to pay for goods and services with their mobile phones, but using the phone as a key is not that common. By replacing all physical keys with digital ones, you don't need to worry about bringing your keys with you – your mobile phone is the only key you'll ever need. Digital keys make even more sense for rental apartments as the owners can share keys with the tenants without any physical contact.

Rental apartments are extremely popular these days. They're great for a holiday or a business trip and the cost is much cheaper than at a hotel. The downside though is the need for the owner and tenant to meet up to hand over the key for the rental – a time-consuming procedure. Due to that, some owners have chosen to leave the door key in a key storage safe box. Even though it limits contact between the parties, there's a huge safety issue with tenants being able to copy the keys. If a key gets lost or stolen, changing the door lock would be an extra cost for the owner.

## Problems with physical keys

- **Time waste and logistics**  
Being on a stand-by all the time without knowing when your tenant arrives and having to physically be present
- **Lost, stolen or copied keys**  
The time and money it takes to create new keys, or in a worst case scenario, changing the door lock
- **No overview of key usage**  
There is no way for the owner to tell when their rental is accessed and by whom

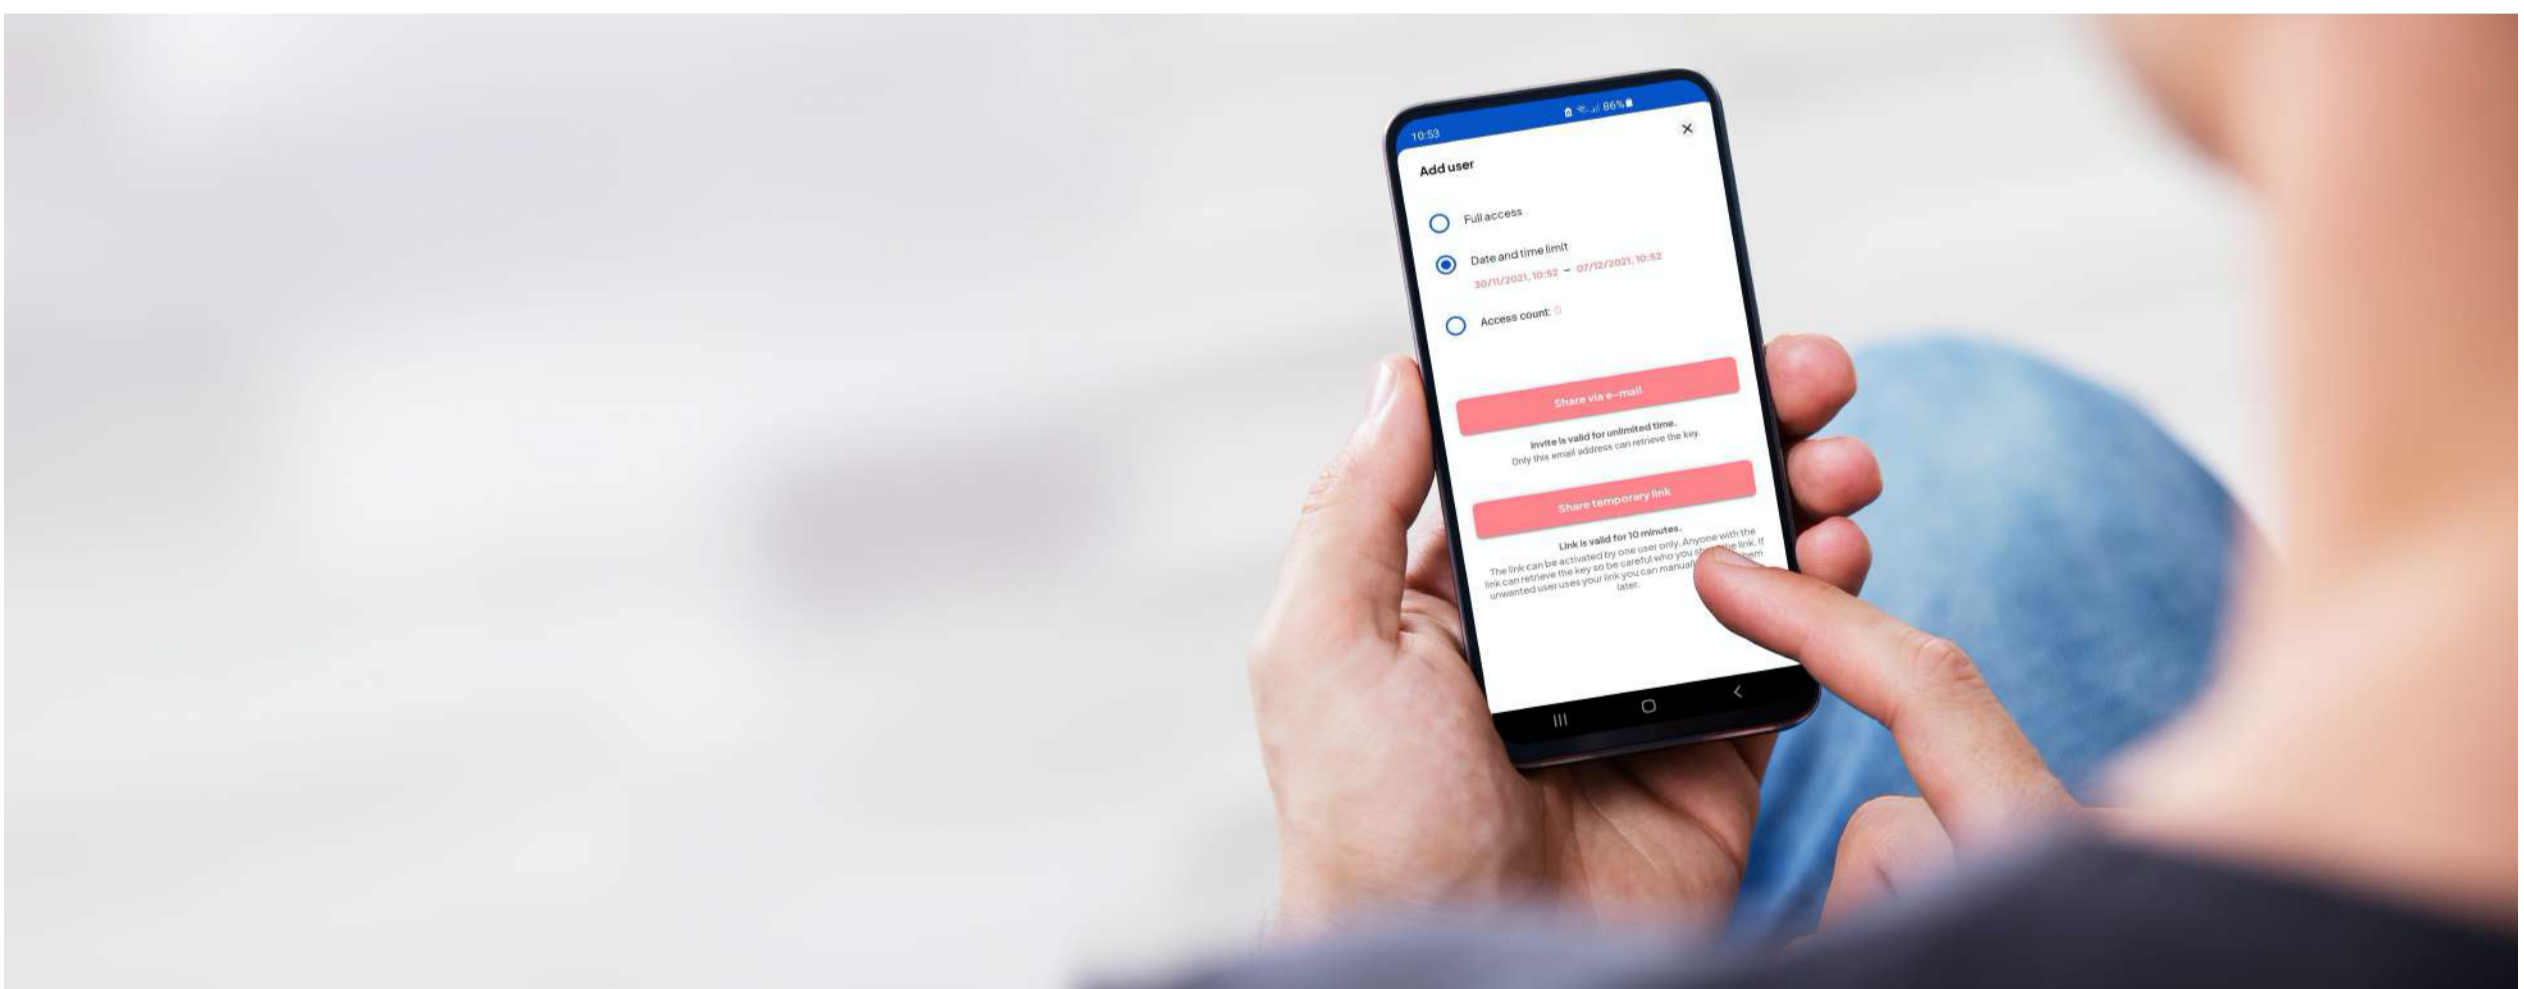

The BLE Locking's Euro cylinder will change the way the rental apartments operate. The door furniture will stay the same – simply replace the current cylinder lock and you have digital keys that are operable from the BLE Locking mobile app. The cylinder's battery life is 2+ years and the app will keep track of it. There is no need to worry about lost or stolen keys, nor is there a need to meet up to exchange keys. As easy as it is to share the keys to your tenants, it's even easier to delete them once they've left the premises. There's also an option to share a limited access key for a chosen time period (e.g., a week), after which the key will be automatically disabled. In addition, the Euro cylinder can be activated with a 6 – digit PIN code for instances where the mobile phone is lost. Keys can be retrieved by logging in to your new phone.

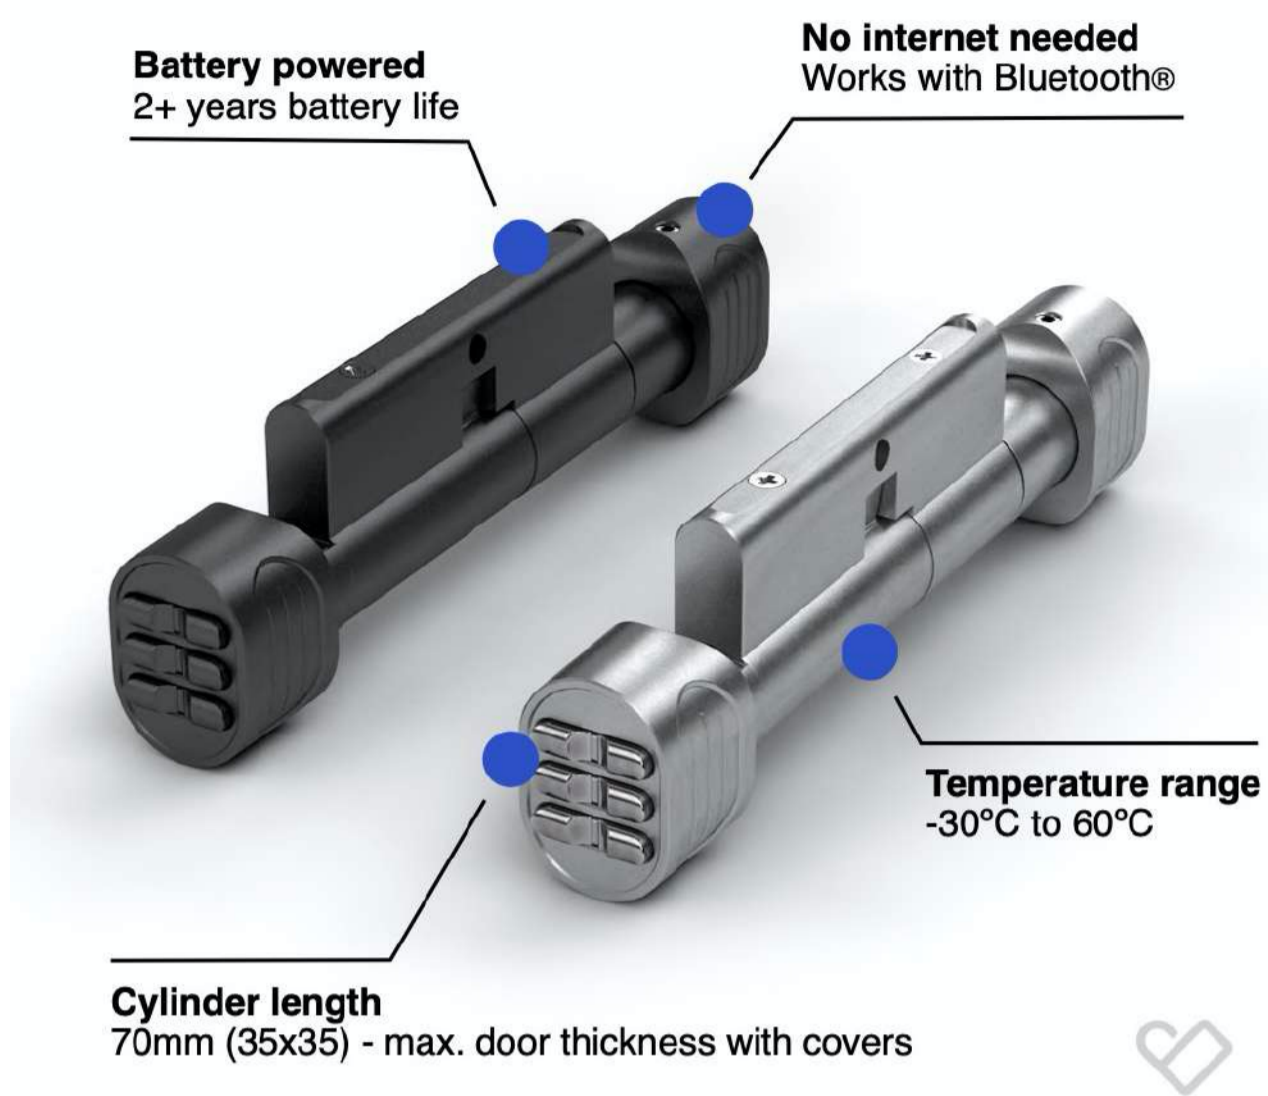

## Benefits of BLE Locking

- **Quick and easy installation**
- **No contact key-sharing**
- **One mobile app for all your keys**
- **10 times cheaper than physical keys**
- **No internet needed – works with Bluetooth**
- **Bank-level security**

There are a lot of benefits to using the BLE Locking's Euro cylinder. You gain valuable time from minimizing the physical contact that is needed to hand over a key. In addition, physical keys can cost up to 10 times more. The BLE Locking solution's digital keys cost around €1 and the first 10 keys are free. Our solution is secure, and unlike physical keys, the digital ones cannot be copied nor shared to third parties. Even more, locking history is available for the owner that shows when the keys have been used.

With our solution, your entrances can be digitized in a matter of minutes, and you will save valuable time and money!

## Getting started:

1. Purchase the BLE Locking Euro cylinder
2. Replace your current cylinder lock with the BLE Locking Euro cylinder (5-minute installation).
3. Download the BLE Locking mobile app and scan the cylinder's QR code to register your lock.
4. The lock will be shown in the app and can now be opened digitally.

## Sharing the digital keys with tenants:

1. In the BLE Locking mobile app, choose the time period for which the keys shall be active and send the digital keys to necessary people.
2. The invitee will receive the key to the BLE Locking app in their mobile phone and can use their key for the time period that you, as an owner, chose.
3. When the time has passed, the key will automatically become inactive.
